ABOUT OPTICSHIELD

OpticShield™ is an ultra clear polyurethane film, providing perfect protection of paint or other exposed parts of the car or other means of transport. Thanks to its unique properties such as impact resistance, low surface tension and autoregeneration, OpticShield™ provides the best possible protection.

WHY OPTICSHIELD?

OpticShield™ Paint Protection film boasts extreme durability, high glossiness and self-healing properties. A special nano coating provides hydrophobicity so the excessive water drains out of the car body. Our films comprise the self-healing elastomeric polymers eliminating and correcting scratches. Not only OpticShield™ self-heals, but it is anti-contaminant and anti-yellowing. It is attributed to specially produced elastomeric polymer, that not only eliminates surface damage, but has greater hardness and exceptional resistance to debris, oil, chemicals, bird droppings etc. Hence, OpticShield™ is an outstanding product in such product category. A perfect protection of your car in the long-run. With regard to the car fleet, your financial situation or your personal preference, there are a variety of OpticShield™ paint protection films you can select from.
